

# Slow Dust

---

## Dust Control Agent

### Slow Dust Application Instructions:

See Precautions below. Slow Dust is extremely light and can blow away on application during winds. Choose a calm period to apply. Do not apply if rain is present.

1. Moisten footing slightly if dry. Minimal moisture is all that is needed, Do not over water or product will be difficult to groom in.

a. If the footing is too wet, it is more difficult to mix the Slow Dust into the footing.

2. Groom the top surface 2-3" deep. Spread Slow Dust on your arena using a handheld broadcast seeder or rubber tire push spreader. SET TO SMALLEST HOLE. DO NOT OVER SATURATE.

**Not to exceed** .80 grams per square foot, or 1.8 lbs. per 1,000 square feet.

3. After spreading, groom again to mix Slow Dust evenly into your footing.

4. Water the surface; do a heavy watering but do not over saturate and create puddles.

5. Let the product work its way in to the footing for the next 12 hours. Do not walk or ride on surface for 12 hours.

6. After the waiting period, groom at a shallow depth, not to exceed 1.5" for the first two weeks. Keep the surface slightly moist; do not let it completely dry out between watering. Slow Dust is bio-degradable and requires small amounts of water to keep product activated on a regular schedule.

**NOTE:** Organic materials in your footing (like sawdust, leaves, manure, urine, etc.) will decrease the effectiveness of Slow Dust because of pH balance.

If you have questions, please contact Premier Equestrian at 800-611-6109.
